The Atlas Business Telephone system is the perfect solution for any business requiring all the features and benefits of a large telephone system without the large price tag.

Easy to use, most features can be accessed using a single feature key; hold, transfer, redial, speakerphone. Other keys are programmable as either line, extension or one touch dials. Keystations are very user friendly. Optional features include Caller I.D. which is shown on all ringing phones. The system can be set for the Automatic Attendant to answer all incoming calls, answer only on no reply or switched on and off as required.

The Voice Mail option includes Automatic Attendant and provides a powerful voicemail system for all extensions to use. You can even set your voicemail to notify you via your mobile if you have messages on your Atlas phone.

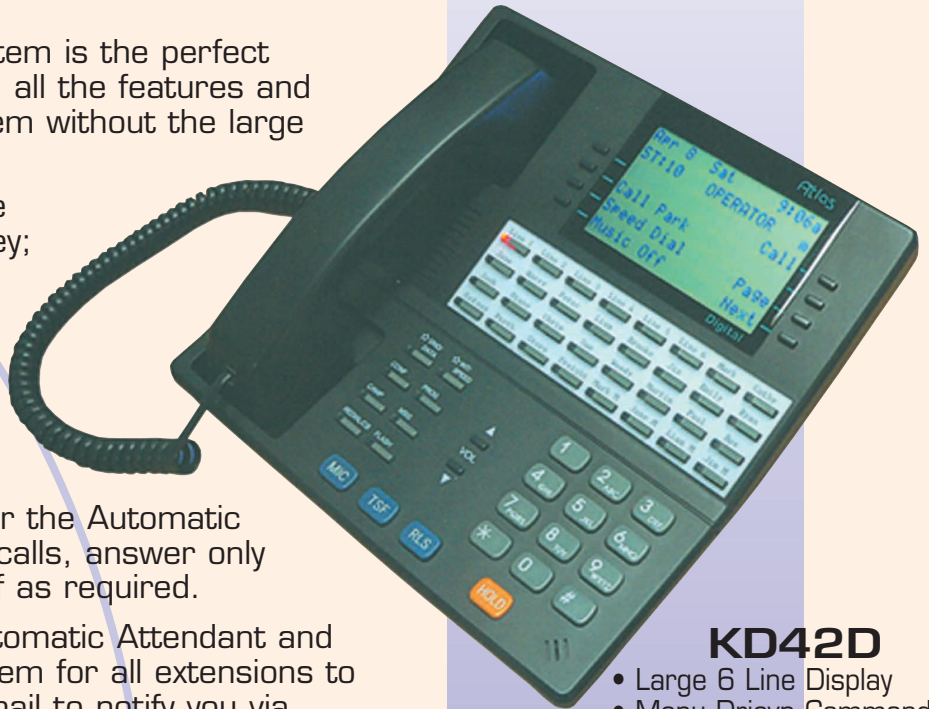

The Atlas systems are manufactured by the giant Bitronics Corporation and Key Systems USA (over 250,000 systems sold to date) for markets in the USA and Australasia.

The ATLAS System has been designed using the latest in digital technology - new technologies like DSP's and SMT manufacturing processes, which insure quality and reliability, serving both you and your customers for years to come.

The Atlas systems offer an extensive array of features and flexible configurations. They can be tailored to meet your current needs and grow as your organisation grows. The EX30 can grow to 8 lines and 20 phones, whilst the EX60 can grow to 12 lines and 32 phones.

Professional telephone call handling is vital to the success of any business. With the Atlas system you will create the right impression.

With worldwide sales at over 2000 systems per month, you can be rest assured that you are purchasing a product which will be supported and will take your office communications to a new level.
